

# 3 Simple Steps to a Successful Pharmacy Immunization Program

1. FORECAST
2. IMMUNIZE
3. REPORT

## WHAT IS IMMSLINK?

A full-featured immunization interface that allows providers to connect to state immunization registries from within their system. ImmsLink integrates directly into the existing workflow to allow seamless, real-time access to a patient's immunization history and ACIP forecast for clinical decision support. Administered vaccination data is then sent back to the registry.

## WHY IMMSLINK?

### Ensuring Compliance

**28**

*States that currently REQUIRE pharmacies to report immunizations to the state registry*

**50**

*States that the APhA guidelines recommend report their immunizations to the registry as a best practice*

### Empowering Providers

**66%**

*Girls receiving the HPV vaccine that do not complete the series, making decision support at the pharmacy an important step to close the coverage gap*

**83%**

*Patients coming to the pharmacy for a flu shot who are also due for other vaccinations*

### Partnering for Prevention

**92%**

*US population living within 3 miles of a retail pharmacy making Pharmacists FRONTLINE Health Care Providers*

**1,000,000**

*preventable cases of shingles EACH year*
